yuma.js
Image Annotation for the Web

AIT AUSTRIAN INSTITUTE OF TECHNOLOGY

yuma.js is a tool to support collaborative image annotation on the Web.

Select regions on the image.
*Add Post-It-style free text notes.*
Store annotations on an annotation server, or in your own environment.

Embeddable.

No big client/server framework.
No prescribed portal environment.
No fixed toolstack. **Just a JavaScript library** that works with your Website.

Click and Drag to Annotate

The late-gothic church "Maria Himmelfahrt". It is home to the "Hallstätter Marienaltar", a winged altar created by Leon Astl in the early 16th century.

Rainer Simon Candia - the medieval name of Crete's capital Iraklio during the time of Venetian rule. The name could refer to the city as well as the island as a whole.
April 13, 2012 at 13:19

Extensible.

Plugins to extend base functionality for specific use cases.
Modules to support additional media types, e.g. **zoomable images**.
Customizable visual appearance through CSS.

Interoperable.

Integrate seamlessly with the OKFN Labs **Annotator Web annotation system**. Exchange annotations with **Open Annotation** compliant systems.

Free and Open Source.

Licensed under the **GNU LGPL** - free for commercial and non-commercial use.
